DON'T PANIC - HERES A STEP BY STEP

Day 1 - The first three hours after the procedure is finished are **MOST IMPORTANT!** You must blot the clear lymph off of the brows with a wet cotton round followed by a dry cotton round every 30 minutes for the next 3 hours. In 3 hours you will re-apply a **TINY** amount of bacitracin. Reapply every 6 hours following for 24 hours total.

DAY 2-6 - After 24 hours switch to **TATTOO GOO** with a q-tip **NO FINGERS**. Tattoo goo should be applied every 4-6 hours throughout the day for a minimum of 5 days to retain pigment and reduce dry , itchy , flaking eyebrows. Do **NOT** peel , pick or itch the eyebrows. Scabbing of the brows is normal at this stage, do not pick off scabs prematurely as you will lose color.

Day 7-14- Apply Tattoo Goo as needed. If the eyebrows are dry , flaking or itchy keep using the tattoo goo until it subsides. It is important to note you may add brow pencil to the area if needed in between touchups after 7 days of healing. It will take about 4 weeks total for pigment to resurface and heal completely .

IMPORTANT REMINDERS-

- NO TANNING
- NO GLYCOLIC ACIDS OR RETINA A
- NO CHEMICAL PEELS
- DO NOT SWIM FOR 14 DAYS
- DO NOT PICK OR PULL SCABS OR CRUST
- NO MAKE-UP IN THE BROW AREA
- USE SUNBLOCK AFTER 7 DAYS
- COLOR CHANGE OR LOSS IS TO BE EXPECTED
- THICK LAYER OF TATTOO GOO BEFORE BED AND SHOWER
- NO NEOSPORIN OR AQUAFOR
